taken March 23-25, 2022. Margin of error 2%.

Want Lower Pump Prices? Use More Ethanol

A new Morning Consult survey finds strong support among registered voters for expanding the use of renewable fuels, like ethanol, to cut fuel prices. Nearly three in four voters support increasing sales of the E15 ethanol blend, and more than two-thirds believe automakers should be incentivized to make more flex-fuel vehicles. With ethanol selling for significantly less than gasoline, domestic renewable fuels can help keep high fuel prices in check. Visit ethanolrfa.org/survey for more information.

A Message From the Renewable Fuels Association:

Ethanol Saves Drivers Money at the Pump

The common 10% ethanol blend of fuel (often labeled as E10) currently saves drivers nearly 25 cents for [every gallon of gas](#) they purchase, and being homegrown, ethanol can bolster our energy security as it is [better insulated from price impacts](#) of geopolitical events than gasoline. It's time for policymakers to increase the use of renewable fuels like low-carbon ethanol, especially higher blends like E15 and E85. Visit ethanolrfa.org/survey for more information.
