

Diagnosis, Isolation, and Management of COVID-19 (Community/Primary care setting)

Revised 1/5/22

The information contained herein should not be used as a substitute for a physician's independent judgement as to appropriate medical care and treatment. There may be variations in treatment that are recommended based on individual facts and circumstances. This document has been created based on currently available information. Since guidance on COVID-19 is changing rapidly, TCCN is unable to make any representation and/or warranties of any kind, including, but not limited to, any implied warranties of merchantability or fitness for a particular purpose. TCCN is not assuming any duty to update or modify for specific circumstances.

*Isolation increases from 10-20 days for any severely immunocompromised child (ANC<500, >2 mg/kg steroid for >5 days.)

*** CDC does not factor mask-wearing or PPE in their definition of a community exposure; Masks are source control and when worn correctly and consistently do provide protection against transmission.
